

# Business Spam Mailserver //

It's simple, really. Our Business Spam Mailserver is complete email security for your business without the hassles of hardware or software purchase and installation.

- o Simple Administration
- o 99% Spam Filtering
- o 100% Virus Filtering
- o 1 in 1,000,000 chance of a false positive

## How it works...

By redirecting your emails through our dedicated business spam mailserver all your emails will be screened for spam and viruses. Once checked they will then be redirected back to your mailserver.

The email protection engine used is the newest, most capable engine available on the market today.

No "spam assassin" technology is used in our Business Spam Mailserver. It has the edge over all competitors in terms of kill rate performance, false positive performance, message per second processing performance and adaptability to new threats.

## Simple Pricing...

Unlike most providers, our Business Spam Mailserver is not licensed by user. We simply license per 10,000 messages screened by the server (whether spam or not). Each block is charged at £15.

## Example...

Domain	Messages Received/month
yourdomain.com	25,000

(3x £15) = 30,000 messages

Total Cost = £45 per month
